

**Amendments to the Specification**

Please replace the paragraph beginning at page 4, line 11-14, with the following paragraph:

As shown in Fig. 2, the base 11a may define the recess 15 into which at least a portion of a container 20 is received. The base 11a may further include a pair of shoulders ~~17~~ that extend inward beneath the container 20 on either side of its neck  
21.

Please replace the paragraph beginning at page 4, lines 23-29 and extending on to page 5, lines 1-3, with the following paragraph:

Returning to Fig. 2, it may be seen that a nozzle locating bar 28 is located generally at the bottom of the base 11a and includes a recess 29 for receipt of the nozzle 27. To allow the pump 25 to be driven axially inward to pump soap from the container, the locator bar 28 is movable with the nozzle 27 and may be mounted on slide guides that limit the bar's movement in the axial direction. In this way, a handle 12 that interacts with the locator bar 28 may be used to move the nozzle 27 and dispense soap from the container 20. In the example shown, the handle 12 is pivotally attached to the cover ~~16~~ 11b and includes rearwardly extending arms (not shown) that engage the locator bar 28 to vertically displace the nozzle 27 and actuate the pump 25.
